

CablePort turn

Convenience and functionality

The desktop connection CablePort turn has a motorized lid, which opens and closes when pressing the buttons. When closed, it is level with the desktop, providing a clean surface.

Safety through electronics

As long as cables are inserted, the CablePort turn cannot be closed. An electronic device stops the lid from closing when it hits an obstacle and opens it again. Thus neither your fingers nor any cables can be squeezed in.

- Motorized desktop connection, opens when pressing the buttons
- Protection against squeezing in cables and fingers through an electronic device
- Pre-configured and ready to plug in with all cables of 2.5 m lengths (socket/plug)
- Prepared for quick installation
- Elegant design: black anodized aluminium plate with concealed connections, frame and casing silver
- Can be mounted in horizontal or vertical position

CablePort turn	
Ref. No.	7446 000 100
